Instructions for Creating Laminated Ash Seed Identification Tool

- Print “National Ash Seed Collection Initiative” page in color.
- Use sharp knife or razor blade to cut windows where indicated.
- Laminate page using 5mm (minimum) lamination pouch.
- Cut a piece of clear adhesive tape to the size of each window. Place 1 – 2 seeds on each piece of tape and apply the taped seed to the appropriate window.
- **Take care to correctly identify the seeds being used. Consult your local NRCS Field Office, Conservation District, or local forester for assistance in seed identification.**
